

IrRep: hands-on session

By Maia G. Vergniory
&
Mikel Iraola

Diagnosing topology within TQC

1

Calculate the
band structure

2

Determine the IRs
of valence bands

3

Check if they
coincide with an
atomic limit ?

Diagnosing topology within TQC

1 Calculate the band structure

2 Determine the IRs of valence bands

3 Check if they coincide with an atomic limit?

$$\begin{array}{l}
 H(\mathbf{k}) \longrightarrow \epsilon_{k,1} |\psi_{k,1}\rangle \longrightarrow \bar{\Gamma}_9 \\
 \epsilon_{k,2} |\psi_{k,2}\rangle \longrightarrow \bar{K}_6 \\
 \epsilon_{k,3} |\psi_{k,3}\rangle \longrightarrow \bar{M}_5
 \end{array}
 \longrightarrow
 \{\bar{\Gamma}_9, \bar{K}_6, \bar{M}_5\} = \sum_i n_i EBR_i$$

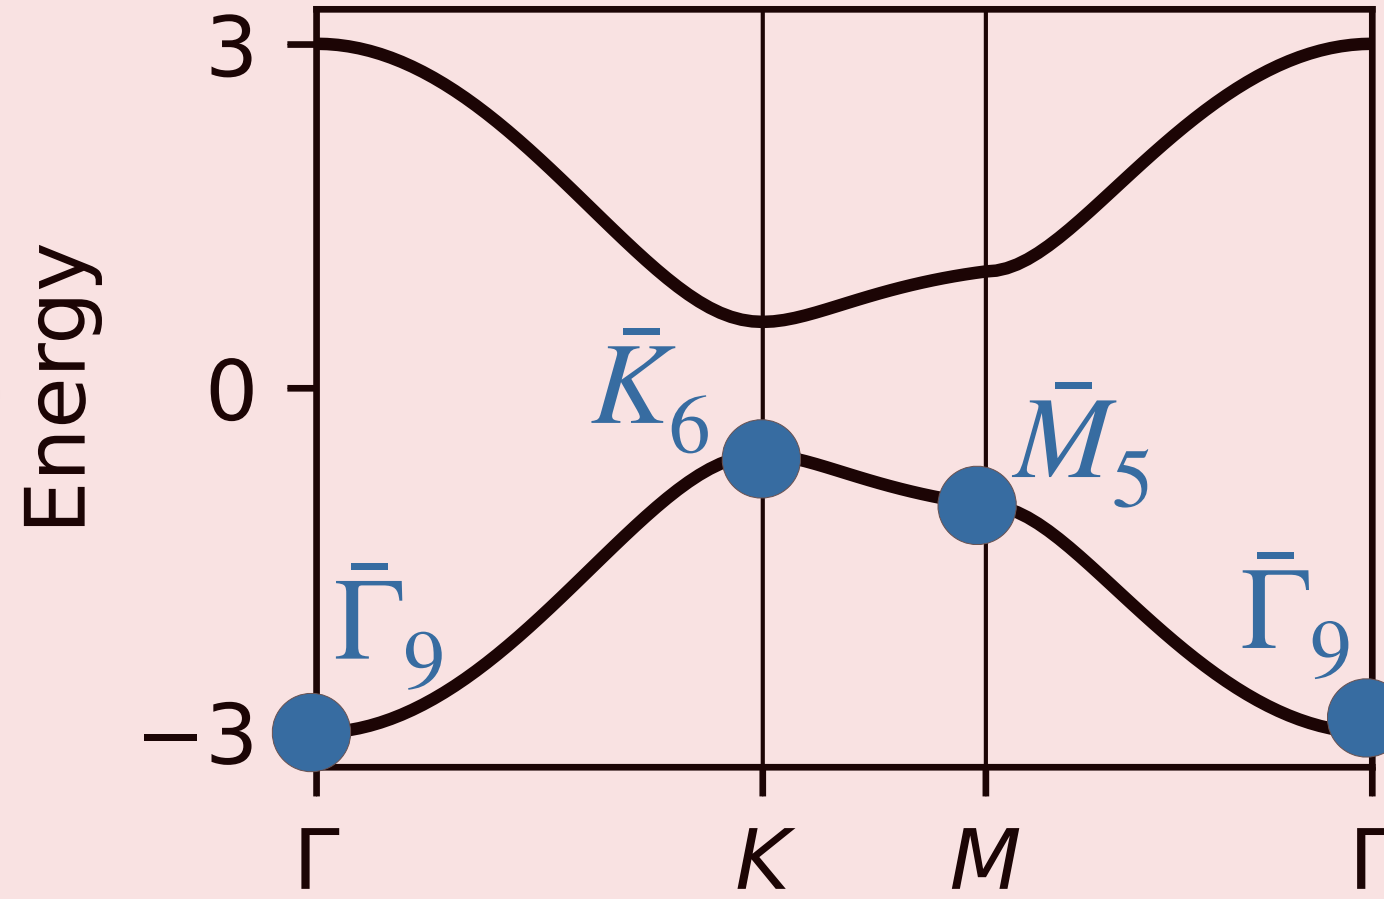

$$n_i \in \mathbb{N} \cup \{0\}$$

Diagnosing topology within TQC

1 Calculate the band structure

2 Determine the IRs of valence bands

$$\begin{array}{l}
 H(\mathbf{k}) \longrightarrow \epsilon_{k,1} |\psi_{k,1}\rangle \longrightarrow \bar{\Gamma}_9 \\
 \longrightarrow \epsilon_{k,2} |\psi_{k,2}\rangle \longrightarrow \bar{K}_6 \\
 \longrightarrow \epsilon_{k,3} |\psi_{k,3}\rangle \longrightarrow \bar{M}_5
 \end{array}$$

Density Functional Theory

3 Check if they coincide with an atomic limit ?

$$\{\bar{\Gamma}_9, \bar{K}_6, \bar{M}_5\} = \sum_i n_i EBR_i$$

$$n_i \in \mathbb{N} \cup \{0\}$$

Bilbao Crystallographic Server

Diagnosing topology within TQC

1

Calculate the band structure

$$H(\mathbf{k}) \longrightarrow \begin{matrix} \epsilon_{k,1} |\psi_{k,1}\rangle \\ \epsilon_{k,2} |\psi_{k,2}\rangle \\ \epsilon_{k,3} |\psi_{k,3}\rangle \end{matrix}$$

Density Functional Theory

2

Determine the IRs of valence bands

$$\begin{matrix} \epsilon_{k,1} |\psi_{k,1}\rangle & \longrightarrow & \bar{\Gamma}_9 \\ \epsilon_{k,2} |\psi_{k,2}\rangle & \longrightarrow & \bar{K}_6 \\ \epsilon_{k,3} |\psi_{k,3}\rangle & \longrightarrow & \bar{M}_5 \end{matrix}$$

IrRep

3

Check if they coincide with an atomic limit?

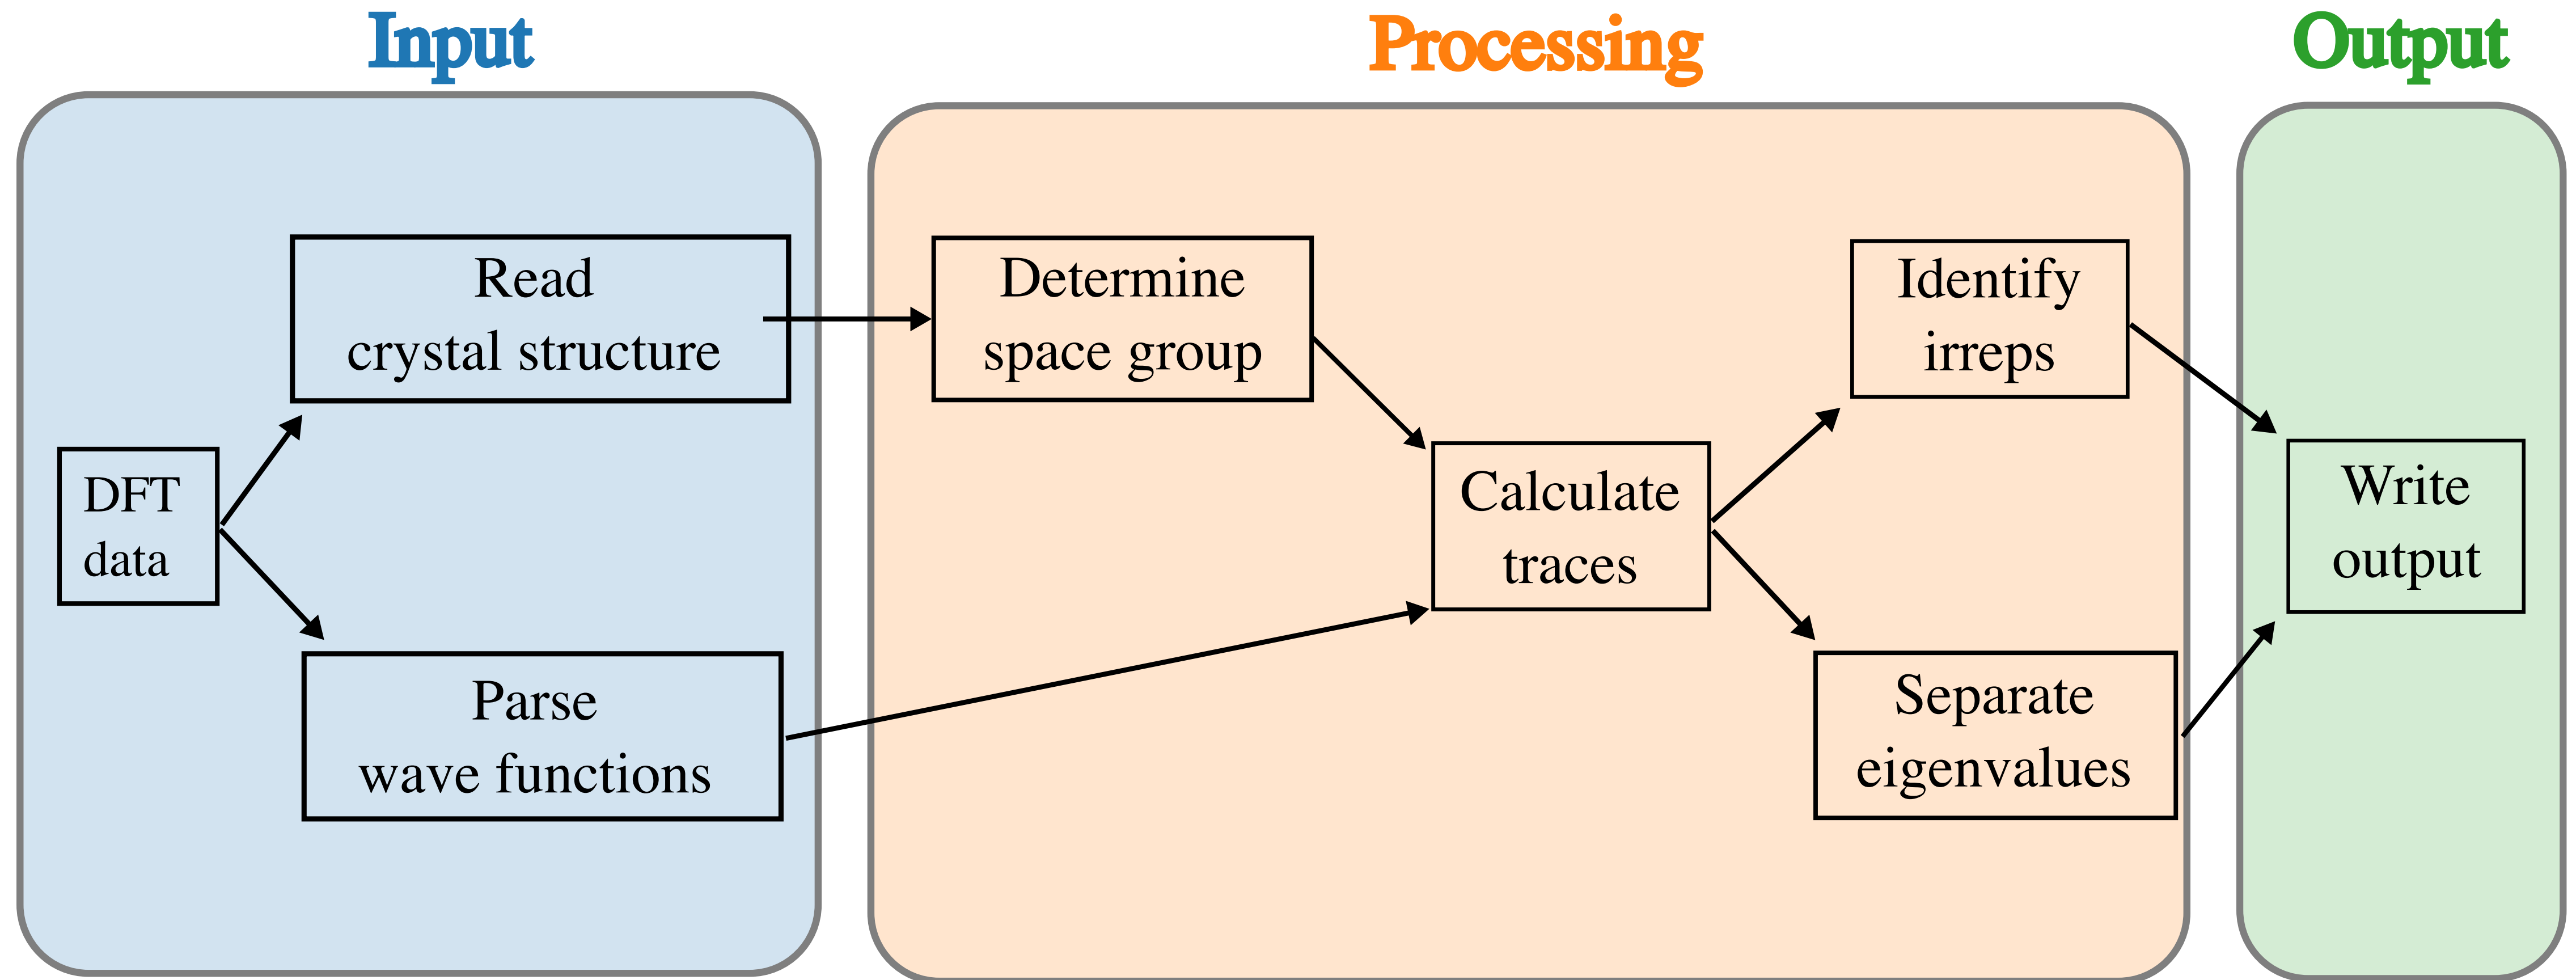

$$\{\bar{\Gamma}_9, \bar{K}_6, \bar{M}_5\} = \sum_i n_i EBR_i$$

$$n_i \in \mathbb{N} \cup \{0\}$$

IrRep: how does it work?

IrRep: how does it work?

IrRep: how does it work?

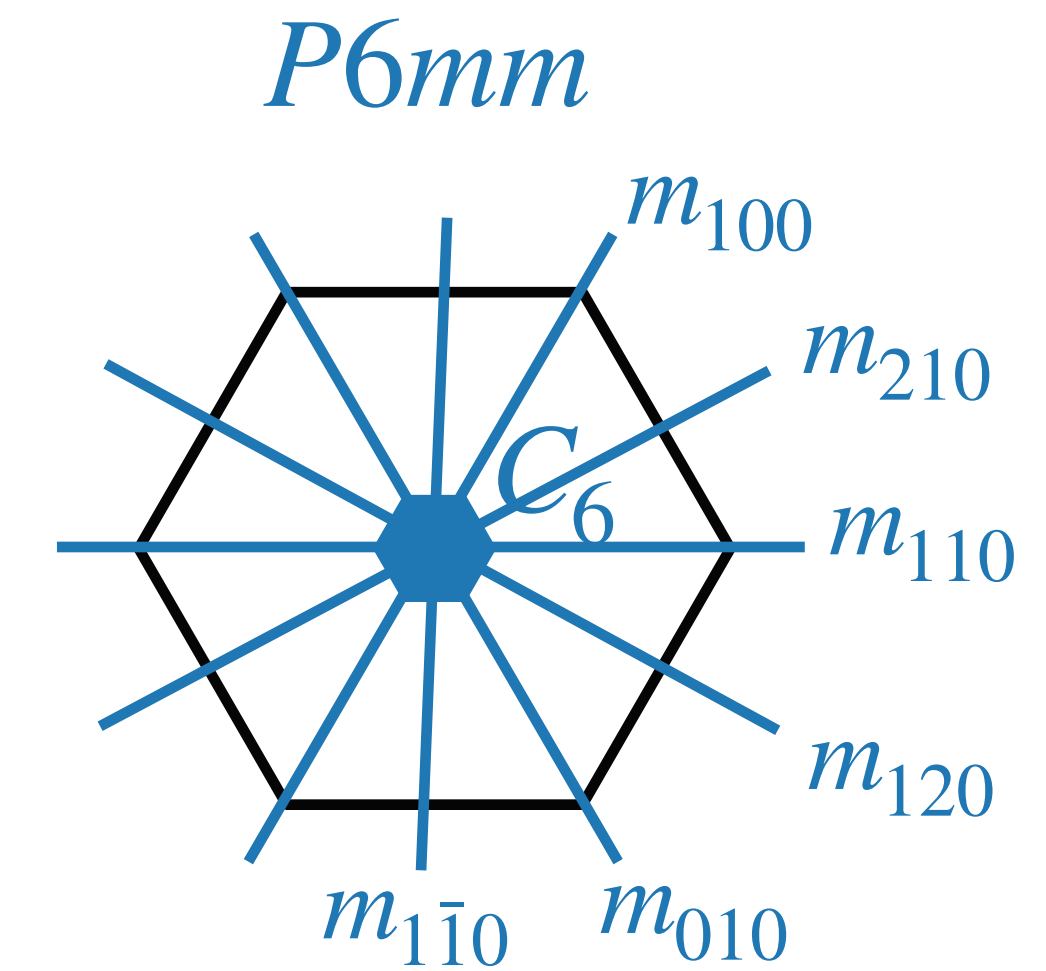

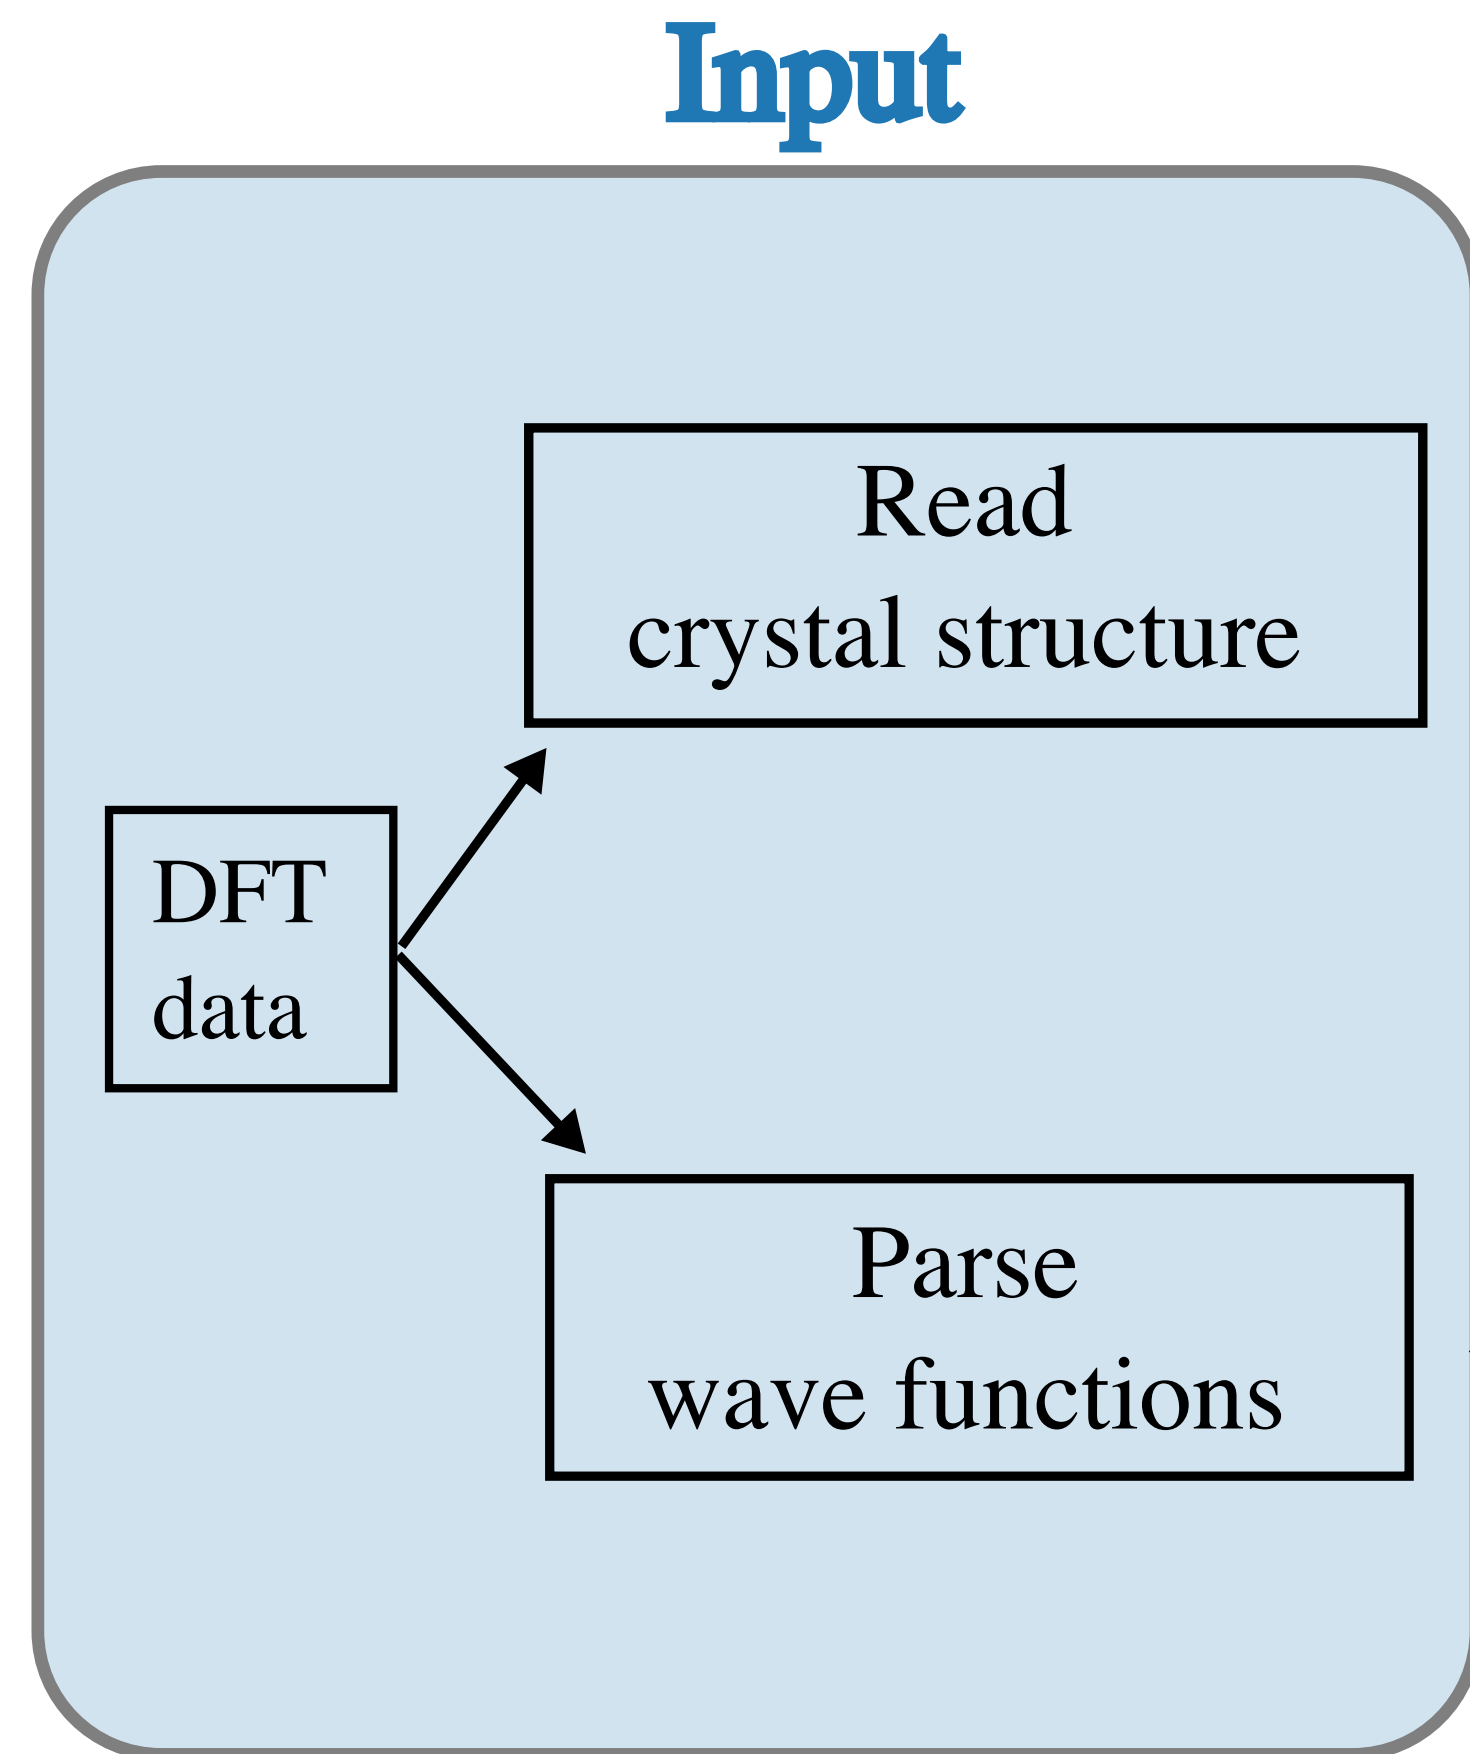

IrRep: how does it work?

Wave functions are expanded in terms of plane waves

$$\psi_{kn}(\mathbf{r}) = \sum_{\mathbf{G}} C_{kn}(\mathbf{G}) e^{i(\mathbf{k}+\mathbf{G})\cdot\mathbf{r}} \longrightarrow |\psi_{kn}\rangle = \sum_{\mathbf{G}} C_{kn}(\mathbf{G}) |\mathbf{k} + \mathbf{G}\rangle$$

IrRep: how does it work?

IrRep: how does it work?

- 1 Identify the symmetries that leave the point K invariant

IrRep: how does it work?

- 1 Identify the symmetries that leave the point K invariant
- 2 Pick $g = \{R | \mathbf{v}\}$ and calculate the expected values $\langle \psi_{Kn} | g | \psi_{Kn} \rangle$ and $\langle \psi_{Km} | g | \psi_{Km} \rangle$

IrRep: how does it work?

1 Identify the symmetries that leave the point K invariant

2 Pick $g = \{R | \mathbf{v}\}$ and calculate the expected values $\langle \psi_{Kn} | g | \psi_{Kn} \rangle$ and $\langle \psi_{Km} | g | \psi_{Km} \rangle$

$$g | \psi_{kn} \rangle = \sum_{\mathbf{G}} C_{kn}(\mathbf{G}) g | \mathbf{k} + \mathbf{G} \rangle = \sum_{\mathbf{G}} C_{kn}(\mathbf{G}) e^{-i(\mathbf{Rk} + \mathbf{RG}) \cdot \mathbf{v}} | \mathbf{Rk} + \mathbf{RG} \rangle$$

IrRep: how does it work?

1 Identify the symmetries that leave the point K invariant

2 Pick $g = \{R | \mathbf{v}\}$ and calculate the expected values $\langle \psi_{Kn} | g | \psi_{Kn} \rangle$ and $\langle \psi_{Km} | g | \psi_{Km} \rangle$

$$g | \psi_{kn} \rangle = \sum_{\mathbf{G}} C_{kn}(\mathbf{G}) g | \mathbf{k} + \mathbf{G} \rangle = \sum_{\mathbf{G}} C_{kn}(\mathbf{G}) e^{-i(\mathbf{Rk} + \mathbf{RG}) \cdot \mathbf{v}} | \mathbf{Rk} + \mathbf{RG} \rangle$$

$$\langle \psi_{kn} | g | \psi_{kn} \rangle = \sum_{\mathbf{G}} C_{kn}^*(\mathbf{Rk} - \mathbf{k} + \mathbf{RG}) C_{kn}(\mathbf{G}) e^{-i(\mathbf{Rk} - \mathbf{k} + \mathbf{RG}) \cdot \mathbf{v}}$$

IrRep: how does it work?

1 Identify the symmetries that leave the point K invariant

2 Pick $g = \{R | \mathbf{v}\}$ and calculate the expected values $\langle \psi_{Kn} | g | \psi_{Kn} \rangle$ and $\langle \psi_{Km} | g | \psi_{Km} \rangle$

$$g | \psi_{kn} \rangle = \sum_{\mathbf{G}} C_{kn}(\mathbf{G}) g | \mathbf{k} + \mathbf{G} \rangle = \sum_{\mathbf{G}} C_{kn}(\mathbf{G}) e^{-i(R\mathbf{k} + R\mathbf{G}) \cdot \mathbf{v}} | R\mathbf{k} + R\mathbf{G} \rangle$$

$$\langle \psi_{kn} | g | \psi_{kn} \rangle = \sum_{\mathbf{G}} C_{kn}^*(R\mathbf{k} - \mathbf{k} + R\mathbf{G}) C_{kn}(\mathbf{G}) e^{-i(R\mathbf{k} - \mathbf{k} + R\mathbf{G}) \cdot \mathbf{v}}$$

3 Compute the trace of the symmetry

$$g : \begin{pmatrix} \langle \psi_{nK} | g | \psi_{nK} \rangle & \langle \psi_{nK} | g | \psi_{mK} \rangle \\ \langle \psi_{mK} | g | \psi_{nK} \rangle & \langle \psi_{mK} | g | \psi_{mK} \rangle \end{pmatrix} \longrightarrow \text{Tr}(g) = 1$$

IrRep: how does it work?

- ✓ Interfaces to 4 DFT codes (more to come...)
- ✓ You can use the cell that you want for the DFT calculation
- ✓ Uses the notation of the Bilbao Cryst. Server
- ✓ It has an extensive documentation on its web page
- ✓ It's for free !
